

PEST CONTROL SCHEDULE

TSHCL shall be professionally inspected and treated for pests twice per month. The details of this service are found in “Standards of Performance for Tri-State Healthcare Laundry.” In general, an AIM program is used. The situation is ASSESSED by comprehensive inspections noting any environmental issues or structural conditions conducive to pests. IMPLEMENTATION has focused on prevention and environmentally responsible methods. Finally, MONITORING takes place on an on-going basis during regular twice a month inspection. A written report documents all services performed, any pest activities, ways to correct the problem, and any recommendations.

The plant is visited, inspected, and treated twice per month.

On the first visit, the plant will be inspected and treated primarily for insects, spiders, rats and mice.

On the second visit, the main focus will be inspection and treatment for bed bugs.

In addition, any time there is a noticeable problem, a special call will be made.
